

Extended Misting System pump

Manages up to 100 nozzles!
Adjustable water flow.
Makes no noise.
Perfect for misting frog rooms,
orchid nurseries, greenhouses
etc.

This unique pump can manage from 1 up to 100 nozzles and has a low noise level.

By opening the valve you can bypass the water flow when a small amount of nozzles is used. This will prevent frequent start/stop of the motor. The bypass water can be back routed to the water container.

This pump is self-priming so you can place the pump above water level.

The Extended Misting pump is 12 Volt DC and comes with a DC regulated power supply.

The fitting to the nozzles is 6mm, so you should use 6mm tubing. (sch014)

The connection to the water container should be 6mm transparent tubing. (sch015)

Technical specifications

Extended Misting System pump

Open flow: 1,8Gpm/6.8l/min

Pressure: 100 PSI/6.8 bar

Volts: 12V dc

Amps: 7 A

DC regulated Power supply

Input: 220V AC 50Hz

Output: 13,8V dc - 10 Amp constant

Fused for protection
