

Whisper silent ventilator

You can use this ventilator in every situation, where there is a risk of overheating like vivarium hoods, aquarium hoods, frog rooms, orchid nurseries, and greenhouses.

The sensor in the ventilator detects temperatures from 30 to 50 degrees Celsius and adjusts the speed of the ventilator accordingly. Because it is extremely noiseless, it is perfect for situations where noise could be annoying. The ventilator must be built in such a way that the sensor can detect the temperature.

Technical specifications

Air replacement: 22-56 m³/h
Speed: 1000-2500 RPM
Noise: 12-26db(A)
Power: 12Volts, 1,6 Watt
Dimensions: 80x80x25mm
Cable length: converter-ventilator 140cm
