

### **PuroSmart Reverse Osmosis System**

*Here it is,*  
the most compact Reverse Osmosis System available. Simply click it on the kitchen faucet and it is ready for use.

*Finished?*  
Just click and take it away.  
No difficult installation anymore.

### **Pure water is essential for plants and animals.**

This system forces the tap water through a highly selective membrane through which only water molecules are allowed to pass. It carries off all soluble salts to the drain. With average water pressure, it is possible to purify up to 25 litres of water per day. In parts of the world where tap water is highly chlorinated, replace the carbon filter every 3 months.

To ensure the highest quality drinking water, replace the RO membrane every 12 months or 1500 litres (400 gallons) of treated water.

The Reverse Osmosis System becomes cost-effective with a use of +/- 15 litres per week.

*Osmosis water is perfect for all your other plants and makes a damn good cup of tea or coffee.*
